

CLAIMS

- [001] An egg tray (9, 10) for a refrigerator, comprising a support plate (1) in which a plurality of receptacles for respectively one egg is formed, and a wall surrounding the support plate, characterised in that the receptacles are formed by openings (2) in the support plate (1) and that the surrounding wall is divided into a plurality of wall sections (7) separated by recesses.
- [002] The egg tray according to claim 1, characterised in that the wall sections (7) are each constructed to that they project over the circumference (8) of the support plate (1).
- [003] The egg tray according to claim 2, characterised in that a section of the circumference (8) of the support plate (1) on which an upright wall section (7) is arranged so that it projects over the circumference (8) is located diametrically opposite to a section of the circumference (8) on which a recess is located.
- [004] The egg tray according to claim 2 or claim 3, characterised in that at least two wall sections (7) are arranged on a longitudinal edge of the support plate (1).
- [005] The egg tray according to any one of the preceding claims, characterised by a spacer disposed on an underside of the support plate.
- [006] A pair of egg trays according to any one of the preceding claims, characterised in that the wall sections of one egg tray differ in height from those of the other egg tray.
- [007] The pair of egg trays according to any one of the preceding claims, characterised in that the wall sections of one egg tray and those of the other egg tray has the same dimensions with regard to height.

- [008] The pair of egg trays according to any one of the preceding claims, characterised in that the two egg trays can be stacked by engagement of the wall sections of one egg tray into the recesses of the other.
- [009] An egg tray (9, 10) for a refrigerator, especially according to any one of the preceding claims, comprising a support plate (1) in which a plurality of receptacles for respectively one egg is formed, characterised in that a handle projects from the support plate (1) above its centre of gravity.
- [010] The egg tray (9) according to claim 9, characterised in that in addition to the handle, a slit (5) is formed in the support tray (1) through which a handle of a second egg tray (10) can be passed.
- [011] The egg tray (9) according to claim 9, characterised in that the handle has the form of a plate (3) and that one surface of the plate (3) is directly adjacent to the slit (5).
- [012] The egg tray (9) according to claim 11, characterised in that the plate (3) is thicker in its upper area.
